Raised Vegetable Bed Installation Service: We do the heavy lifting for you!

For vegetables, area should receive at least 6 hours of direct sun per day.

Area where bed is placed should be level and clear for bed installation. You do not need to till the soil. Scrape the soil surface free of vegetation. Beds can also be placed on hard surfaces such as gravel or concrete. **Price includes raised bed kit, delivery, assembly, soil, and installation of soil.** Any additional plants up to 10 gallons can be delivered on the same order for no additional cost. (If you purchase a larger item or fountain, we'll add regular delivery fees).

We can deliver your purchased vegetable and herb transplants along with your order and you can plant them according to your needs. Or, we can do the planting for you. Planting in our installed raised beds can be done **per customer's plan**: \$1.00 per plant for 4 inch pots, \$2.00 per plant for 1qt - 5 inch pots; \$5.00 per plant for 1 gallon pots.

NHG installation staff cannot plan placement of vegetables or other plants in your raised beds for you once they are on site. You must have a planting plan, which corresponds with the size of the bed, ready for them when they arrive. You can plan your layout using some of our sample templates or from your time with our Garden Coach. These planting services are for beds we are installing, not pre-existing beds. **Planting fees are in addition to bed installation package price.**

Installation in our delivery zones. Please speak with NHG staff about delivery and set-up to your area.
