**Cultivar/Variety Name      Color      Description**

**Antique Roses**

These Old Garden roses are naturally disease resistant, hardier and require less care than most other roses. Garden roses are generally very fragrant and adaptable to a variety of landscape situations. They have many classifications ranging from dwarfs to cluster blooms to climbers and everything in between.

**David Austin English Roses**

These roses bring the romance and charm of the roses of years past to your garden. Their blooms are packed with layers of petals, appealing fragrances and soft coloring.

**Climbing Roses**

Many of our modern rose climbers originated from hybrid teas that have a tendency to grow unusually long canes. Climbers can grow to a length of 18 to 20 feet and bloom as profusely as many hybrid teas. Unlike other types of roses, climbers are not pruned heavily each spring. They should be selectively pruned after the first flush of blooms.

**Florascape Roses**

These hardy spreading roses quickly cover large areas creating a carpet of low maintenance color ideal for slopes and rocky areas. Great in baskets for trailing color.

**Floribunda Roses**

This type of rose began as a cross between Polyantha and hybrid tea. The cross was such a success that an entire new call of rose was named. These shrubs reach 2 ½ to 3 ½ feet in height, with dense branching. They are free blooming with small blooms in large clusters.

**Grandiflora Roses**

Queen Elizabeth, when it was introduced in 1955, was clearly an extraordinary rose. However, it did not fit any of the already existing classifications. It was, therefore, given the distinction of naming a rose category for it. This type usually ranges from 4 ½ feet upward with long stems sometimes supporting several blooms, but slightly smaller than hybrid tea. Most Grandiflora shrubs support a heavy compliment of blooms throughout the growing season and are an excellent source of flowers.

**Hybrid Tea Roses**

This is the best type for cut flowers since each stem has only one bloom. Bushes grow 3 ½ to 4 ½ feet tall and get bigger in ideal conditions. The Hybrid Tea is the most popular type of rose sold in America.

**Miniature Roses**

These roses are small in stature but are prolific bloomers. They generally do not exceed 2 feet tall and bloom continuously with small flowers. They are extremely low maintenance and are great for containers.

**Shrub/Hedge Roses**

These roses are easy-care, versatile and fragrant. They adapt well to many soils and temperatures. They have colorful hips throughout winter.

**Texas Pioneer Roses**

These roses are the result of crosses between some of Dr. Robert Basye's disease resistant varieties and David Austin's English Roses, Hybrid Perpetuals, Hybrid Teas and other large-flowering shrub roses. The roses are named for various people and places important to Texas heritage. You will find them to be beautiful, resilient and tough, much like the early Texas pioneers they honor.

**Tree Roses**

The tree rose is made from three different rose shrubs-one from the root, stalk and blooming variety. This form of rose usually comes in three sizes 18", 24" and 36". We also offer a 2fer Tree Rose, this is a rose standard with two varieties on one plant.
