

Every Blooming Thing

January - February 2018

Clockwise from left: *Another View*, by Bob Nunn, *Village Landscape*, by Pavlina Panova, *Daphne Prairie II* by Cassandra Black, *St. Remy*, by Bobby Chitwood, *CR 1553*, by Rebecca Shewmaker, *Forest (sunup)*, by Nick Kuntz, *Fields in Maria Aalter*, *Belgium*, by James Hinkle.

Landscapes: Real & Imagined

Fresh perspectives on a traditional subject

In keeping with our mission of promoting a lifestyle enhanced by gardening, nature and the environment, we return to the classic landscape painting for this exhibition. With great diversity of style and medium, each of these artists brings a unique vision to the traditional subject matter.

Blending the physical characteristics of the land with art and story make for inexplicable feeling, experience and recollection. Inspired by memories and make-believe scenes of the natural world, we present a remarkable body of work that shapes our sense of place. Explore realistic and fanciful views of scenes - local

and abroad. This group show features intricate thread paintings, traditional and abstract plein air, zen watercolors, surreal aerial landscapes and much more. Featuring Bob Nunn, Rebecca Shewmaker, Cassandra Black, Pavlina Panova, Bobby Chitwood, James Hinkle and Nick Kuntz. Artwork on display and for purchase January 12th through March 9th, 2018.

Work on view and available for purchase through March 9th

5-7pm**

Artists in attendance
Receptions are free, casual and open to all

✔ Tomatoes

If you plan to start from seed to grow more varieties, you should begin in January. Transplants go in the ground late February to mid-March in order to get them established and bushy before the optimum temperature time frame for fruit set, which is typically in April through early May.

✔ Leeks

Leeks are a member of the onion family, but they do not form bulbs. Slips arrive in early January. Grow them similarly to the way you would onions.

January

✔ Onions

Plant onion slips in January. They are ready to harvest when the temperatures rise, usually in May.

Winter Vegetable Checklist

✔ Asparagus

Plant crowns in February. This perennial crop is an investment of time and space, but well worth the reward.

February

✔ Potatoes

Plant seed potatoes in February into rich, well drained soil. Dusting sulfur helps to protect from fungal growth.

✔ Rhubarb

While it requires extra care due to our hot summers, it's well worth the effort: the edible stalks add a delicious, fruity flavor that's truly unique.

✔ Horseradish

An easy crop to grow. The hot, zesty punch of flavor fresh from the garden is unbeatable.

Tomatoes in Winter?

January

February

What's the biggest mistake most beginning gardeners make when growing tomatoes in DFW?

Starting too late!

Start seeds in January. Transplants go in the ground late February to mid-March in order to get them established and bushy before the optimum temperature time frame for fruit set, which is typically in April through early May.
