

Every Blooming Thing

Fall 2019

Garlic cloves and shallots are best planted in October. Harvest the bulbs in spring.

Purple pak choi is a tasty Chinese cabbage that's so lovely it can also be used ornamentally.

Did you know you can cook with **pumpkin**? Bake and scoop out the flesh for soups, pie and even smoothies. Don't forget the nutritious seeds!

A super easy crop that packs a punch of nutrition, start **kale** in fall and grow successive crops through early winter and spring. Broccoli, **cauliflower** and Brussels sprouts thrive in the cooler months as well.

Chop the leaves as well as the stems of **Swiss chard** in a quick sauté with salt and pepper for a delicious, healthy treat.

Specialty pumpkins arrive by mid-September

2:30-4:30pm **Free**

Butterflies: Fall & Winter Survival

Guest speaker Dale Clark teaches you how to help butterflies survive the next two seasons.

Saturday, October 5th
4:30-5:30pm **Free**

Invest in a Sweet Harvest This Fall

Whether you are a beginning gardener or a seasoned planter, every gardening success—and failure—broadens your experience and builds confidence to try something new.

Thankfully, the cooling weather of fall re-energizes us, and fall is the best time for planting trees and shrubs in north Texas. Build your long-term edible landscape and celebrate the season by planting a fruit tree!

To begin, dig a hole twice as wide, but no deeper, than the root ball in the container. Since a healthy root system will eventually spread far and wide, backfilling with native soil is best and amending is not recommended. You can, however, make your beneficial soil organisms happy: Espoma Bio-Tone provides beneficial microbes and fungal mycorrhizae to encourage strong roots, and monthly applications of root stimulator are also recommended, as is a 2”

to 3” layer of mulch.

Beginning in late September, we will have a great selection of peaches, apples, persimmons, figs and other favorites—all varieties that we’ve carefully chosen to succeed in our local climate.

Our Garden Advisors can assist with selecting a variety for your needs, along with tips on pruning, thinning and care to ensure you have sweet success.

Flavorful, Healthy Garlic for Your Garden

October is garlic planting month in North Texas and we are very excited to introduce a new grower to the NHG family, Forever Yong Farm in southern Arizona, who specialize in growing garlic varieties that perform well in warmer winter soils. Their wonderful bottomland soil and pure water have enabled them to produce high quality garlic for planting stock and culinary use for over 20 years.

Forever Yong Farm uses organic methods to produce high quality garlic planting stock. They are Certified Naturally Grown which is an alternative certification to USDA Organic and a better fit for smaller scale growers.

Besides the choices pictured, try one of the new, red gourmet varieties. While ‘Red Toch’ is popular for its balanced flavor & rosy hue, the beautiful burgundy ‘Ajo Rojo’ is sweet & spicy. We will be selling garlic in bulk this year, so stock up on what will soon be your new favorites!

‘Native Creole’

A creole garlic with a high sugar content, moderate heat & rich flavor. One of the best garlics for eating raw.

‘Sonoran’

A nicely striped, early, warm-weather adapted variety that offers a mild, well-rounded flavor & heat.

‘Thai Fire’

A popular variety from Bangkok, Thailand. Large, hot & early harvesting. Cloves gradually increase in heat intensity from first bite.

‘Blanco Piacenza’

A reliable choice that adapts to different climates with high yields. Produces a medium well-rounded flavor & heat.

Camellias for Cooler Weather

'Dad's Pink'

Consider adding a Camellia—whether for blossoms, tea or both—to your garden this year! Camellias form glossy, deep-green leaves and are evergreen in north Texas, meaning they provide important garden structure for shady areas where few evergreens will thrive well. Since they're cool-season bloomers, they're further valued for bringing charm and color to our colder months, as most varieties sport large, luxurious flowers in shades of white, red and pink.

Protected, shady sites are best; bright, indirect light or dappled light through an

'Mine-no-yuki'

overhead tree canopy will be ideal. With our heavy clay soils, camellias perform best if their soil is amended deeply with acidified compost prior to planting.

If your site suffers from poor drainage, consider adding expanded shale or re-grading the site if necessary, as they will not tolerate saturated soils. Once your camellia is established, it will appreciate a regular monthly feeding of a fertilizer formulated for acid-loving plants, such as Espoma Holly-Tone. Other than that, keeping them mulched and topdressing with acidified compost now

'October Magic Dawn'

and then is all they'll ask in return for their bountiful blooms.

Within our wide selection, there are Camellias that stay fairly small and others that can get very large. We recommend doing research in advance if there's a specific variety you're looking for and calling the store to see that it's in when you're planning to come. Better yet, visit us and speak with a Garden Advisor for an introduction to the full collection, where colors, forms and varieties can be found to suit any shady garden location!
